← **Enable API**

Calendar API

The Google Calendar API lets you manage your calendars and events. [Learn more](#)
[Try this API in APis Explorer](#)

Using credentials with this API

Accessing user data with OAuth 2.0

You can access user data with this API. On the Credentials page, create an OAuth 2.0 client ID. A client ID requests user consent so that your app can access user data. Include that client ID when making your API call to Google. [Learn more](#)

API request → User consent → User data

Server-to-server interaction

You can use this API to perform server-to-server interaction, for example between a web application and a Google service. You'll need a service account, which enables app-level authentication. You'll also need a service account key, which is used to authorize your API call to Google. [Learn more](#)

Your service → Authorization → Google service

5. Click the Go to credentials
